

Mobile App Ver 3.1

SafeHer AI

Neural Emergency Response & Multimodal Safety System

**Mobile App Presentation By team -
SafeHer Innovators**

ASHWANI MEEL

The Problem

Key Points:

Women's safety concerns in secluded areas.

Traditional apps require manual button presses, which is impossible during a sudden attack.

Delayed emergency response due to lack of real-time location and audio proof.

● Our Solution

- **Key Points:**

- SafeHer AI: A background-monitoring AI that doesn't wait for you to press a button.
- Uses Audio AI to detect distress (Screams/Cries).

- Uses Motion AI to detect struggle (Phone shake).
- Real-time ML Risk Scoring based on environmental factors.

Key Features

Multimodal Detection:

- Voice AI: Detects keywords like "Help Me" or "Bachao".
- Shake Trigger: High-velocity motion detection.
- Automatic Siren: 120dB alarm to alert nearby people.
- Stealth Tracking: Live GPS sharing with emergency contacts and Police.

[Home](#)[Product](#)[Service](#)[Contact](#)

How It Works

- Frontend: HTML5, CSS3 (Cyberpunk UI), JavaScript (Web Speech API).
- Backend: Python Flask (Neural Core).
- AI Logic: Pattern matching for audio and motion sensors

LIVE DEMO HIGHLIGHTS

- Risk Index: Dynamic scoring (0–100%).
- Interactive Terminal: Real-time logging of AI actions.
- Cross-Platform: Mobile and Desktop compatible.

Future Scope

- Integration: Direct link with nearest Police PCR vans.
- Wearables: Integration with Smartwatches and Rings.
- Offline AI: Edge computing for areas with no internet.
- Community Safety: Heatmaps of safe/unsafe zones for the public.

Conclusion & Q&A

"SafeHer AI is not just an app; it's a silent guardian that listens when you can't speak."
